Mike Rodgers — Forward Deployed Engineer

Mike Rodgers

Forward Deployed Engineer · Deployment Strategist · Enterprise AI Solutions Architect

Denver, CO · 262.343.5680 · mrodgersjs@gmail.com · LinkedIn · GitHub · rodgersintelligence.com

---

Summary

Forward-deployed engineer who embeds with enterprise customers and owns AI deployments end to end — discovery and scoping, solution design, integration against production systems over REST APIs and webhooks, guardrails, evaluation, and the release gates that keep them running.

Hands-on daily in **Python** and **TypeScript**: operates a production multi-agent platform in daily use — 56 routes (31 Next.js/React pages, 23 TypeScript APIs), 1,147 Python modules, 159 test suites, Postgres with row-level security, and a promote-on-pass ingestion pipeline that ships unattended.

Fifteen years delivering technology into regulated healthcare enterprises, including **both seats of the same deployment** — bought and integrated a clinical telehealth platform as the health-system operator, then later deployed it as the vendor.

Selected engineering artifacts

Artifact	What it proves
proof-studio / rigforge	ProofPacket verification layer (MIT, Python) — agent "done" is cryptographically re-verifiable (CLI, MCP, signed ledger, OTel).
mesh-studio	Multi-service agent orchestrator — boot/supervise with health checks and bounded restart.
rig-deterministic-build-starter (via proof-studio)	Vite + TypeScript starter that ships with a sealed, hash-verifiable ProofPacket.
Live operator platform	Authenticated multi-role ops dashboard; Postgres RLS; unauthenticated health returns **401** by design.
jake-studio	Local-first operator layer + L10 harness + Builder≠Verifier closed loops.
fde-portfolio	Discovery → eval → handoff playbooks for customer-facing AI

Artifact	What it proves

implementation.

```
# 60-second proof (do not take the resume's word)
git clone https://github.com/mrodgersjs-web/proof-studio.git
cd proof-studio/packages/rigforge && pip install -e . && rigforge demo
```

Core competencies

Build - Python & TypeScript production services - REST APIs, webhooks, OAuth, idempotency - LLM & multi-agent systems (RAG, tool calling) - React, Next.js & operator-facing UIs - Docker, Kubernetes & self-hosted inference - Postgres, pgvector, row-level security - Data pipelines & schema validation - CI/CD, GitHub Actions, release gates - Cloud: AWS, Azure, OCI, Cloudflare

Deploy - Enterprise integration (EHR, CRM, ITSM) - Customer-embedded discovery & scoping - Solution design & guardrail architecture - Ambiguous / undefined problem spaces - Evaluation harnesses & acceptance gates - Observability (OpenTelemetry, traces, logs) - PII handling & regulated-environment compliance - Production debugging & incident response - Executive & clinical stakeholder translation

---

Experience

Founder & Forward Deployed Engineer · 2025 – Current

Rodgers Intelligence Group · Denver, CO

- Build and operate a production multi-agent platform in daily use — 56 routes (31 Next.js/React pages, 23 TypeScript API routes), 1,147 Python modules and 159 test suites across 244k lines — deployed on Vercel behind an authenticated session layer and used by a live operator every day.
- Engineered the data layer end to end: Postgres via PostgREST with row-level security, a single-flight read cache that coalesces concurrent requests behind one query, and a schema-validated ingestion pipeline that promotes a new corpus only after a six-check gate passes, then deploys itself.
- Authored Model Context Protocol servers (555- and 276-line implementations with a dedicated test suite) and integrated 48 external tool servers behind a single orchestration and permission layer, giving agents governed access to enterprise systems.
- Built a three-layer build gate — data validation, test global-setup, and change verification — that blocks a bad release before it reaches production; it fired in production and stopped a corrupt corpus from shipping.
- Operate a retrieval and knowledge layer over a 61,987-page / 116,158-chunk corpus at 100% embedding coverage (Postgres + pgvector), under a single-writer source-of-truth contract with derived read-only indexes that prevent write conflicts across concurrent agents. Upstream contributor to the retrieval engine.
- Built and operate a four-node self-hosted AI compute fleet — Docker and Kubernetes, role-tiered by workload (light extraction, mid-tier structuring, heavy retrieval/synthesis), LAN-first with remote failover — so inference runs on owned hardware instead of per-token vendor spend.
- Consult as an embedded forward-deployed engineer for private-equity portfolio companies, healthcare organizations, and professional services firms — technical discovery, system integration, and handover of production workflows with measurable acceptance criteria and runbooks.

Senior Director, Strategy, Marketing & Competitive Intelligence · 2021 – 2026

Oracle (formerly Cerner)

- Designed and ran an AI-powered competitive intelligence system processing 150+ daily competitor signals, replacing external consultants and driving measurable revenue growth across segments of a $6B+ healthcare enterprise.
- Led enterprise AI adoption across telehealth, data analytics, and product roadmaps — deployed capability, not slideware.
- Supported post-acquisition integration following Oracle's acquisition of Cerner, embedding AI as a core transformation driver across product and go-to-market teams.

Vice President, Business Development · 2020 – 2021

EmOpti, Inc.

- Deployed a clinical telehealth platform into hospital environments as the **vendor** — the same platform previously bought, integrated, and operated from the health-system side (both seats of one enterprise deployment).
- Launched inpatient telehealth in partnership with Advocate Health, HCA, and Jefferson Memorial; owned technical scoping and integration through go-live.
- Delivered $1M in new revenue in year one and secured $10M Series A during COVID-19; scaled a stalled startup to 35% CAGR under peak-load conditions.

VP, Commercial & Strategic Innovation · 2018 – 2020

Advocate Health (fka Aurora Healthcare)

- Scaled the EmOpti teletriage deployment across 14 emergency departments; owned clinical-workflow integration across a multi-hospital system.
- Founded and scaled the 83 Tech Harbor subsidiary — recruited a 30-person team, managed $27M budgets, directed $28M in venture investment at a projected 30% IRR.
- Architected growth plan to move revenue from $6B toward $25B+ through major M&A (Advocate + Atrium); presented to CEO and Board.

Director, Strategic Innovation · 2016 – 2018

Advocate Health (fka Aurora Healthcare)

- Owned the EmOpti deployment across five hospital systems from the **customer** side — cut ED wait times from 3 hours to 15 minutes for 130,000+ patients; Emergency Care Innovation of the Year Award; $35M operating expense reduction.
- Built an innovation division from zero; launched five revenue-generating workstreams projected at $60M+ impact, including co-development of Babyscripts Care Navigator.
- Directed a $10M venture fund and co-launched the $100M Wisconn Valley Venture Fund with Northwestern Mutual and Foxconn.

Business Innovation Manager · 2014 – 2015

Advocate Health (fka Aurora Healthcare)

- Scaled Babyscripts pediatric platform to 200K+ mothers; secured a $1M Noom partnership for Type 2 diabetes and hypertension tooling.

Operations Improvement Manager · 2013 – 2014

Advocate Health (fka Aurora Healthcare)

- Ran the operational-improvement program that first brought EmOpti into the health system — start of a platform relationship later owned from customer side and, at EmOpti, from vendor side.

Education

B.S. Industrial Engineering — Iowa State University, Ames, IA
GPA 3.63 with Distinction

Credentials

Lean / Six Sigma Black Belt · Project Management Professional (PMP)

Military service

United States Army — Sergeant, Counterintelligence & Communications
Primary Leadership Development Course with Distinction; Primary Leadership Military Award

---

Public engineering surface

Studio	Role
fde-portfolio	Engagement playbooks
proof-studio	False-done / ProofPackets
jake-studio	Operator OS + L10
mesh-studio	Fleet control plane
agency-studio	Role contracts
doctrine	Rules agents load
